PROFESSIONAL SUMMARY

Software Engineer with 1+ years of experience at Cisco building backend services, API validation, observability solutions, and end-to-end automation for network security products. Experienced in Java, JavaScript, Python, Cypress, Jenkins, Terraform, Splunk Observability, REST APIs, and CI/CD. Passionate about building reliable automation, monitoring production systems, and solving complex backend problems.

TECHNICAL SKILLS

- Programming Languages – Java, JavaScript, Python, SQL, HTML, CSS
 - Backend Development – REST APIs, API Validation, Backend Services, Microservices
 - Automation & Testing – Cypress, Postman, End-to-End (E2E) Testing, Regression Testing
 - DevOps & CI/CD – Git, GitHub, Jenkins, GitHub Actions, Terraform, Docker
 - Databases – MongoDB, SQL
 - Frameworks & Libraries – Node.js, Django, Pandas, NumPy, Scikit-learn
 - Tools & Technologies – IntelliJ IDEA, Visual Studio Code, Jira, MongoDB Compass, Jupyter Notebook
 - Software Development Practices – Agile, Debugging, Log Analysis, Root Cause Analysis, Machine Learning Fundamentals
-

PROFESSIONAL EXPERIENCE

Cisco Systems Pvt. Ltd.

Software Automation Trainee (Apprentice) | September 2025 – Present

- Successfully completed Cisco's Software Automation training program in collaboration with SimpliLearn, covering software development, automation testing, backend technologies, and Agile practices.
- Developed and maintained Cypress (JavaScript) end-to-end automation for Cisco Secure Firewall (FMC–FTD) workflows, improving regression reliability.
- Performed backend API validation and functional testing using Postman, ensuring the correctness and stability of network security workflows.
- Investigated and resolved software defects through log analysis, backend debugging, and functional validation.
- Contributed to backend feature development, frontend UI enhancements, and REST API integrations.
- Collaborated with backend, frontend, QA, and DevOps teams using Git, GitHub, Jira, and Jenkins.

AI Variant

Data Science Intern | 6 Months

- Built and evaluated Machine Learning models using Python for classification and prediction tasks.
- Performed data preprocessing, feature engineering, and model evaluation to improve model performance.
- Worked with Pandas, NumPy, Scikit-learn, and Git to develop reusable data processing pipelines.
- Developed reusable data processing pipelines and collaborated using Git for version control and project management.

PROJECTS :

Policy Impact Analyzer (PIA)

Overview

Policy Impact Analyzer (PIA) is a backend service for Cisco Secure Firewall that analyzes the impact of firewall policy changes before deployment. It evaluates the blast radius of policy updates by identifying affected network traffic, devices, and security rules, helping administrators assess potential risks before applying changes. The service integrates with FMC APIs, Search Audit Logs (SAL), MongoDB, AWS S3, and LLM-based services to generate comprehensive impact analysis reports for Access Control (AC), NAT, and IPS policies.

Key Contributions

- Implemented backend monitoring metrics for analysis execution, latency, SLA compliance, and processing duration.
- Designed operational dashboards in Splunk Observability (SignalFx) for real-time monitoring.
- Created Terraform-based alerts to detect failures, latency spikes, and SLA breaches.
- Implemented cross-launch functionality to navigate directly to FMC policy pages using policy UUID and policy name.
- Contributed to frontend UI enhancements and enabled AI agent integration for PIA APIs.
- Enhanced backend APIs, improved observability, and validated end-to-end workflows.

PR Workflow Automation Tool (Spike)

Overview

Developed a Node.js-based automation tool to streamline Pull Request creation across multiple GitHub repositories. The tool automates branch comparison, generates standardized PR descriptions using predefined templates, and reduces repetitive manual effort while ensuring consistency in the development workflow.

Key Contributions

- Automated Pull Request creation using the GitHub REST API.
- Implemented dynamic PR description generation using standardized templates.
- Added structured logging and robust error handling.
- Reduced manual effort by automating repetitive GitHub workflow tasks.

CERTIFICATIONS

- Cisco Software Automation Training – Cisco Systems (SimpliLearn)
- Cisco Certified Network Associate (CCNA) – Cisco
- Data Science Certification – ExcelR Solutions
- Apprenticeship Completion Certificate – Cisco Systems (NATS)

EDUCATION

- B.Tech in Computer Science & Engineering | Sharnbasva University, Kalaburagi | CGPA: 8.7 | 2020–2024
- Pre-University Course (Science) | AKRD PU College, Kalaburagi | 74% | 2018–2020
- SSLC | Government High School, Kalaburagi | 75.84% | 2017–2018
